15: Model Selection

Stat 230 - Spring 2026

```
library(ggformula)
library(bayesrules) # data library
library(broom)
```

Your in-class activity today is simple. Using the `bikes` data, build:

1. A model that prioritizes **understanding**
2. A model that prioritizes **prediction**

You can use as many predictors as you like!

```
head(bikes)
```

```
